

## CASE STUDY: RBS, Shastri Park

### KEY PARAMETERS

<b>Occupancy Type</b>	Office Space
<b>Built up area</b>	290,472 Sq ft
<b>Completed</b>	September 2012
<b>Location</b>	Delhi
<b>Green consultant</b>	En3 Sustainability Solutions
<b>Rating System</b>	LEED ID+C
<b>Rating Achieved</b>	GOLD

### LEED SCORES

The RBS Shastri Park Office space in Delhi has been awarded Gold certification under USGBC's LEED ID+C rating system. The project is a classic illustration of how even when the base building is not green, the commercial interior can incorporate various green measures within their space and achieve maximum energy and water savings and achieve the desired LEED ID+C Gold Rating from U.S. Green Building Council.

### *SITE SUSTAINABILITY FEATURES*

- The project is located in an ideal location with close proximity to public transportation thereby minimizing transportation pollution and strain on local infrastructure, protects green-field site and preserve habitat and natural resources.
- 88% of the base building roof surface has a Solar Reflectance Index of 90.7

### *WATER EFFICIENCY*

- Low flow dual-flush toilets, sensor based urinals and other low flow fixtures installed have resulted in potable water reduction of water use of **44%**.
- The base building landscaping and irrigation systems have been designed to reduce potable water consumption for irrigation by 100% from a calculated baseline case.
- 100% of wastewater on-site to tertiary standard which is then reused on-site

### *ENERGISING THE BUILDING*

- Provision of high performance glazing, energy efficient HVAC design and lighting has contributed to energy savings of about 21.83% over conventional building and HVAC systems.

- Selection of CFC free and HCFC free refrigerants avoids global warming and ozone depletion.
- Light fixtures and efficient lighting design contribute to 32.7% of reduction in connected lighting power density over the base case of ASHRAE standards.
- Occupancy sensors have been installed for 80.33% of the project connected lighting load.
- ENERGY STAR-rated equipment and appliances equal to 91.3%, by rated power, have been installed on the project.
- Metering equipments have been installed for monitoring the energy use in the building such as EB and DG energy

monitoring, individual meters for common area lighting, lifts, chillers, pumps, office area lighting, power and AHUs, measuring chilled water consumption for each tenant using BTU meters for the ongoing accountability and optimization of building energy and water consumption performance over time.

### *RESOURCE MANAGEMENT*

- The project has diverted 75.79% of the on-site generated construction waste from landfill.
- 15.97% of the total building materials, by value, have been manufactured using recycled materials.
- 21.95% of the total building materials value includes building materials and products that have been manufactured within 500 miles of the project site and that 13.2% of the total building materials value includes building materials and products that have been extracted within 500 miles of the project site.
- Use of materials with recycled content and materials manufactured locally/regionally as much as possible to reduce virgin material exploitation

## *INDOOR ENVIRONMENTAL QUALITY*

- Better air quality and additional fresh air by 30% have been provided for enhanced indoor environment
- The project conducted a flush-out prior to occupancy by supplying while maintaining an internal temperature of at least 60 degrees F and relative humidity no higher than 60%
- Low emitting adhesives, paints, carpets and composite wood products have been used to enhance the indoor environment and provide superior workplace for all employees.
- The systems furniture and office seating are Greenguard or ANSI/BIFMA certified, and these products met the testing requirements at the time of manufacture.
- All system seating and furniture used in the project reduce indoor air contaminants that are odorous, potentially irritating and/or harmful to the comfort and well-being of installers and occupants

## *NOVELTIES*

This project is really an excellent example of true sustainable development from design stage until execution and shall definitely become a benchmark for future projects to emulate.

En3 would be glad to answer any queries or questions you have on any green or sustainability related topics. Feel free to contact us at [info@en3online.com](mailto:info@en3online.com) and for more information visit us at [www.en3online.com](http://www.en3online.com).
